

Announcement

New Product - HAUL NETWORK

26 February 2013

RungePincockMinarco Limited ("RPM") [ASX:RUL] today announced the launch of HAUL NETWORK (HAULNET) at the Society of Mining Engineers Annual Meeting & Exhibit held in Denver, USA.

HAULNET is an extension to the TALPAC family of products. It uses interactive 3D graphics to help mine operators visualise, analyse and optimise their haulage routes for the life of the mine.

It rapidly determines the most practical route for a truck to travel, highlighting both the fastest and shortest routes thereby providing significant efficiency savings for customers who utilise this application.

Richard Mathews, Chief Executive Officer said, "As with most of our new products HAULNET can be used by itself or with our other scheduling products given it has been integrated with them. Miners want to maximise the utilisation of their mobile equipment whilst minimising their haulage costs and this is exactly what HAULNET helps them to do."

"HAULNET advances the evolution of our TALPAC software family which it universally accepted as the mining equipment simulation tool of choose for mining operations all around the world.

"Mine operators want to be able to visibly identify operational bottlenecks within the mine as well as optimise the haulage of material because that helps keep costs down while maximising throughput. HAULNET gives them this ability by being able to perform a 3D simulation of the material haulage and the best route network across all time scales, from life of mine level right down to a shift level."
