

## Announcement

### New Product - COAL SEAM AGGREGATION (COAL SEAM AGG)

18 March 2013

RungePincockMinarco Limited (ASX: RUL) [RPM] today announced the product launch of COAL SEAM AGGREGATION (COAL SEAM AGG).

While similar to the functionality of the recently released BLOCK AGGREGATION for open pit metals mines, COAL SEAM AGGREGATION bridges geology and engineering by preparing geological models of open cut coal mines for scheduling in RPM's flagship production forecasting tool, XPAC.

COAL SEAM AGG is designed to help miners reduce their operating costs to deliver better margins by translating geology into mining as new information is uncovered.

COAL SEAM AGG integrates with RPM's flagship software XPAC and allows customers to produce up-to-date production forecasts rapidly after uncovering new geological information, where previously it would be a longer term task.

The product follows RPM's ethos of developing easy to use software, allowing users to spend less time learning the software and more time planning their mines.

COAL SEAM AGG is currently being demonstrated to new and existing XPAC customers.
