About Poseidon Nickel

Poseidon Nickel is developing the Windarra Nickel Project in Western Australia. The Windarra Project has a large initial mining resource and is one of the few new, higher grade sulphide nickel projects in Australia. The Windarra Project is a higher grade nickel sulphide deposit that has demonstrated high recovery levels through a standard nickel floatation concentrator.

The total current Mineral Resource is located at two positions approximately 10kms apart and includes the existing brownfields mine at Mt Windarra and a new discovery at Cerberus.

Poseidon has completed its Definitive Feasibility Study (DFS) and is targeting initial concentrate production in 2014.
